#### Gramática del Guión

```
Rexp \rightarrow Rexp \mid Rexp
Rexp \rightarrow Rexp Rexp
Rexp \rightarrow Rexp *
Rexp \rightarrow (Rexp)
Rexp \rightarrow letter
```

### Gramática No Ambigua: Reflejando Asociatividad a Izquierdas y Precedencia de los Operadores

```
Rexp1 \rightarrow Rexp1 \mid Rexp2
Rexp1 \rightarrow Rexp2
Rexp2 \rightarrow Rexp2 Rexp3
Rexp2 \rightarrow Rexp3
Rexp3 \rightarrow Rexp3 *
Rexp3 \rightarrow (Rexp1)
Rexp3 \rightarrow letter
```

# Gramática sin Recursividad por la Izquierda

## Estudio de la Gramática

NO TERMINAL	FIRST	FOLLOW
Rexp1	( letter	\$)
Disjunct	ε	\$)
Rexp2	( letter	\$)
Concat	( letter ε	\$)
Rexp3	( letter	( letter   \$ )
KClosure	* ε	( letter   \$ )

PRODUCCIÓN	PREDICTION
Rexp1 → Rexp2 Disjunct	( letter
Disjunct →   Rexp2 Disjunct	I
$Disjunct \to \epsilon$	\$)
Rexp2 → Rexp3 Concat	( letter
Concat → Rexp3 Concat	( letter
$Concat \to \epsilon$	\$)
Rexp3 → ( Rexp1 ) KClosure	(
Rexp3 → letter KClosure	letter
KClosure → * KClosure	*
$KClosure \to \epsilon$	( letter   \$ )

# Definición Dirigida por Sintaxis (DDS) de la Gramática Recursiva

Producción Gramatical	Acción Semántica
Rexp1 → Rexp1 <sub>1</sub>   Rexp2	Rexp1.ptr := mknode(' ', Rexp1 <sub>1</sub> .ptr, Rexp2.ptr)
Rexp1 → Rexp2	Rexp1.ptr := Rexp2.ptr
Rexp2 → Rexp2₁ Rexp3	Rexp2.ptr := mknode('-', Rexp2 <sub>1</sub> .ptr, Rexp3.ptr)
Rexp2 → Rexp3	Rexp2.ptr := Rexp3.ptr
Rexp3 → Rexp3 <sub>1</sub> *	Rexp3.ptr := mkunode('**, Rexp3 <sub>1</sub> .ptr)
Rexp3 → ( Rexp1 )	Rexp3.ptr := Rexp1.ptr
Rexp3 → letter	Rexp3.ptr := mkleaf(letter)

### Esquema de Traducción (ETDS) de la Gramática No Recursiva por la Izquierda

```
Rexp1 	o Rexp2 \ \{ Disjunct.h := Rexp2.ptr \} \ Disjunct \ \{ Rexp1.ptr := Disjunct.s \}
Disjunct 	o | Rexp2 \ \{ Disjunct_1.h := mknode('|', Disjunct.h, Rexp2.ptr) \} \ Disjunct_1 \ \{ Disjunct.s := Disjunct_1.s \}
Disjunct 	o \varepsilon \ \{ Disjunct.s := Disjunct.h \}
Rexp2 	o Rexp3 \ \{ Concat.h := Rexp3.ptr \} \ Concat \ \{ Rexp2.ptr := Concat.s \}
Concat 	o Rexp3 \ \{ Concat.h := mknode('\cdot', Concat.h, Rexp3.ptr) \} \ Concat._1 \ \{ Concat.s := Concat._1.s \}
Concat 	o \varepsilon \ \{ Concat.s := Concat.h \}
Rexp3 	o (Rexp1) \ \{ KClosure.h := Rexp1.s \} \ KClosure \ \{ Rexp3.s := KClosure.s \}
Rexp3 	o letter \ \{ KClosure.h := mkleaf(letter) \} \ KClosure \ \{ Rexp3.s := KClosure.s \}
KClosure 	o \star KClosure._1 \ \{ KClosure.ptr := mkunode('\star', KClosure.h) \}
KClosure 	o \star KClosure 	o \star KClosure.ptr := mkunode('\star', KClosure.h) \}
```
